

iD Xpress

HD710

Re-Transfer Printer

Are you Compromising on your Security?

Re-transfer Printer Solutions

When it comes reliability, cost iD Xpress HD710 is your answer. It is reliable, secure, smart, cost effective, user-friendly and compatible. For utmost flexibility, set up to iD Xpress HD710 to obtain the performance you need. iD Xpress HD710 works on re-transfer technology. One of the key advantages of using this technology is that the information printed from re-transfer last longer. This enhanced protection result from first transferring information to be printed on the card to the underside of the clear film. Then the printed information on the film is transferred on the card in such a manner that the information on the card appears to be under protective layer of the clear film.

What makes iD Xpress HD710 unique is its very true to color printing quality and faster printing of standard CR-80 cards making bulk and heavy duty printing easier and faster. A unique feature available with this printer is the centralized printing technology, which enables the printer to print up to 840 single sided CR-80 cards in an hour. Another unique feature making this printer user friendly is its LCD display which clearly indicates the status by displaying various stages. 300 standard 30 mil CR-80 cards can be accommodated in the input card hopper. While the cards are being printed additional cards can be replaced, 1000 single sided CR-80 cards can be printed with our standard YMCK full color ribbon and re-transfer film.
